WOOD-MIZER BLADES INTRODUCE 7 DEGREE PROFILE

New blade cuts through exotic woods, extreme hardwood, seasoned, and frozen wood

INDIANAPOLIS, IN – Wood-Mizer Blades Division, a leading manufacturer of narrow band, thin kerf saw blades, has introduced the new 7 degree blade. Though Wood-Mizer developed this profile eight years ago, the blade has just now been added to their broad product line of bandsaw blades.

With a greater hook angle and higher tooth height than the 4 degree and 10 degree profiles, the 7 degree blade saws exotic woods from tropical regions, extreme hardwoods, and seasoned or recycled beams. Customers have also had success sawing frozen logs. Additionally, the increased gullet capacity removes sawdust more efficiently, allowing a higher feed rate. The 7 degree profile blade meets the demands of all sawmills using a wide range of horsepower engines.

“Wood-Mizer Blades aims to adapt to changing technology. The 7 degree blade meets the new demands of sawmills, running accurately at much higher feed rates, and cutting through difficult hardwoods with the efficiency of normal wood,” says Randy Panko, Wood-Mizer Blades Sales Manager.

According to JP Sinclair of Sinclair Millworks in Vermont who used the new 7 degree profile blade in 15 below zero weather to saw a 22” wide spalted rock maple, “the blade sang through it beautifully, very impressive.”

The 7 degree profile is part of the DoubleHard product line which offers extended life and withstands multiple sharpening and comes in the following options:

- 1.25” x .045
- 1.5” x .045
- 1.25” x.055
- 1.5” x .055

Wood-Mizer Blades manufactures the 7 degree profile and all their blades to fit the length of any thin-kerf sawmills, pallet resaws, or grade resaws.

As a division of Wood-Mizer Products, Inc., Wood-Mizer Blades has access to a network of more than 40,000 Wood-Mizer sawmill owners and operators for feedback and field testing. The company is dedicated to providing the very best blades to fit any narrow band, thin-kerf sawmill or resaw. Wood-Mizer Blades is available from the main office in Indianapolis and branch offices throughout the U.S. and Canada. Orders can be placed by phone, fax, or online.
